

Assignment-01

Explanation:

• ISP [Internet Service Provider]

Provides internet access to your home, Example: Jio, Airtel, BSNL.

• Modem:

Converts the signal from the ISP into a digital signal your home device can use. It connects directly to the ISP through a wired line

[Fiber optic / cable / DSL]

• Wi-Fi Router:

Connected to the modem. It distributes internet to multiple devices either through Wi-Fi [wireless] or LAN cables (wired).

• Device connected:

- Laptop [via wifi or LAN cable]

- Mobile phones [Wi-fi]

- Smart TV [Wi-fi]

- Printers [can be connected to the router wirelessly or wired to the laptop]

• Important Points:

- Router assigns private IP address to each device inside the house [using DHCP]

- All devices inside the home share one public IP address on Internet. [using NAT]

- wireless devices [like phones] and wired devices [like a laptop via LAN] coexist easily.
