

SDLC OVERVIEW:

Building software step-by-step:

1. Requirements:

"What do we need?"

- Gather and analyze user needs.
- Set clear project goals and expectations.

2. Design:

"How will it work?"

- Developer start coding based on the design.
- Transform ideas into working software.

3. Implementation:

"Let's build it!"

- Developers start coding based on designs.
- Transform ideas into working softwares.

4. Testing:

"Did we get it right?"

- Identify bugs and issue early.
- Validates that requirements are fully met.

5. Deployment:

"Ready for the world!"

- Refers the software for real-world use.
- Monitor performance and plan updates.

How they Interconnect.

Each phase depends on the success of the one before it. Skipping or rushing a phase increases risk- communication, Feedback, and iteration keep the SDLC cycle healthy and strong!

"SDLC is not a race- it's a guided journey towards success!"
