

Requirements Gathering Brief: 'Community Connect' App

→ Interview Summary

I acted as a business analyst speaking with: a fictional client, Hochd Neighborhood United, a nonprofit that organizes local community events. The goal to gather key requirements for a new app. Community Connect, designed to help residents discover, organize and attend local events.

→ Key Requirements Identified

- **User Accounts**- Residents can create personal profiles with basic information and interests.
- **Event Creation & Listings**: Users and Organizers can post and manage events including time, location and category.
- **Event Discovery**: Users can browse, search and filter events by location, date or category [eg: arts, sports, volunteer work]
- **RSVP & check-in**: Ability to RSVP to events, get reminders and check-in at events for attending tracking.
- **Volunteer Opportunities**: Events can list volunteer roles and allow signups directly through the app.
- **Notifications**: Personalized push notifications for upcoming events and new activities based on user preferences.
- **Calendar sync**: Option to sync events with Google Calendar, Outlook or Apple Calendar.
- **Accessibility Features**: High-contrast modes (Must-have, should-have, Nice-to-have) to guide MVP priority product [MVP]
- **Change Log**: Maintain a live document that tracks any changes or additions to requirements after the initial gathering.

Summary:

Clear, structured requirements gathering sets the foundation for a focused, user-centred app. By using user stories, traceability matrices, and strong documentation, kichai Cvt can efficiently build while staying fired back.
